

Network Based Appliance

The DataSaver not only provides high-speed AES encrypted data transfer over standard Ethernet networks, it even allows your mobile staff to perform Continuous Data Protection (CDP) and file/folder recovery on the move if your company has VPN access set up.

Installation into a Corporate / Large Company

Multiple Machines Support

Being on a network allows the DataSaver to support Continuous Data Protection (CDP) and Bare Metal Restore / File / Folder Recovery for multiple machines simultaneously without disruptions. Your data is protected and available at all times.

- Easy to Buy:** One Single "Everything Included" Price
- Saves Storage Costs:** Compression, Data De-duplication
- Saves License Fees:** Unlimited Client and Recovery Point Licenses
- Low Running Costs:** Only one Box to Manage and Maintain

Easy to Manage

With multiple machines connected to the DataSaver on a network, it allows the Administrator to easily manage features such as the client accounts and profiles, recovery snapshot scheduler and recovery points, all via a web browser.
